

Don't Compromise

The Kahua Difference:
Flexibility,
Agility,
Scalability,
Collaboration,
Security

Collaboration: *col-lab-o-ra-tion /kəˌlæbəˈrāSH(ə)n/ action of working with someone to produce or create something*

[Collaboration](#) is a key factor in delivering construction projects on time and on budget. Collaboration issues stem from not only siloed information but siloed teams as well. Teams end up managing only their portion of the project without understanding the efforts of the whole group. Lines get crossed, tasks are duplicated, and time is wasted.

To successfully manage capital programs, both internal and external teams are required to maintain substantial amounts of data across multiple projects. With so many people and so much information in

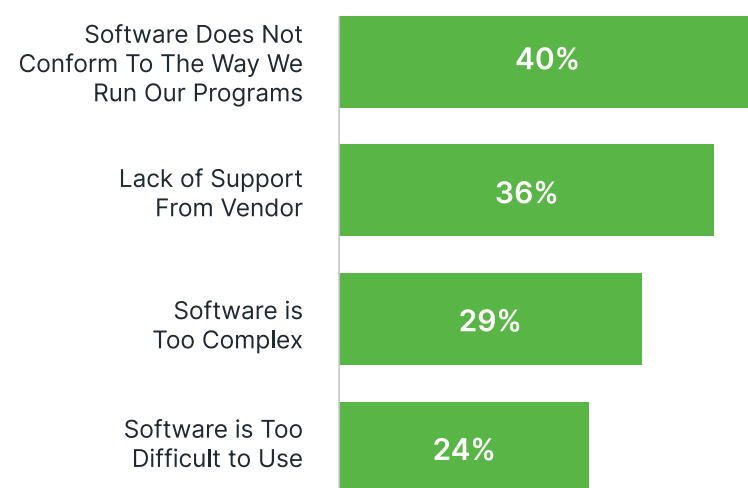

Joint Effort
Collaboration
Cooperate
Partnership
Teamwork
Participation
Working Together

multiple locations, it is easy to miscommunicate without the right system in place.

Organizations that are still using legacy systems, homegrown and/or point solutions that are outdated and rigid, just compound the problem:

- One company owns the main system for each project, and all other participants must log in.
- If there is more than one system, each system requires separate logins and vastly different processes.
- If other project participants want to operate their own systems, they are forced to manually duplicate data for every project, which can potentially lead to costly errors and untimely data.

Factors Limiting Greater Usage of PMIS in Owner Organizations (Among Owners Who Indicate Any Obstacles)
Dodge Data & Analytics, 2022

According to Dodge Data research, more than 40% of owners say that software’s inability to conform to how owners run their programs is the top challenge to expanding [project management information system](#) (PMIS) usage.

Because of this major obstacle, teams will use systems outside of their PMIS for specific functions. The more work that is done outside of a PMIS, the less productive a team is.

There is just one platform that delivers collaboration that eliminates the silos and allows disparate teams and systems to function in a cohesive manner, and that is the Kahua Network.

Kahua’s approach provides transparency across all stakeholders - owners, general contractors and subs - enabling collaboration that results in delivery of projects on-time and on budget. Users can seamlessly connect with other team members and share data, documents and workflows on multiple projects while still maintaining specific processes set by departments and adhering to requirements regulations. The platform can also define roles and responsibilities which helps keep everyone accountable.

In addition, the Kahua Network enables data to flow both ways between third party software solutions eliminating data entry errors ensuring sound decisions are made with the most accurate and current data. Kahua’s flexible platform can [integrate](#) with any system supported by its dynamic structure enabling updates and changes to be done without impacting end users.

When organizations are managing information for dozens or even hundreds of projects simultaneously, they cannot afford to create more risk or waste time and money with data errors or duplicate efforts. Kahua’s platform is a collaborative network for construction organizations that increases productivity by improving how teams relay information. Request a [demo](#) to learn how Kahua is revolutionizing the way teams communicate leading to better management and delivery of capital assets.

“Employees spend 1.8 hours every day—9.3 hours per week, on average—searching and gathering information. Put another way, businesses hire 5 employees but only 4 show up to work; the fifth is off searching for answers, but not contributing any value.”

[McKinsey Report](#)

Choose Kahua

Kahua is a leading provider of capital program and construction project management software, enabling innovation that is changing the way that capital programs are planned and delivered. Global organizations use Kahua’s collaborative solution to improve efficiency, lower costs and reduce project risk throughout the entire lifecycle of their capital programs. Our purpose-built solutions for owners, program managers and contractors enable rapid implementation that minimizes time-to-value and enhances user adoption. With the industry’s only low-code application platform, customers can easily customize existing Kahua apps or even build their own new apps to run their business at peak efficiency today and rapidly adapt as business conditions dictate.
