

# Don't Compromise

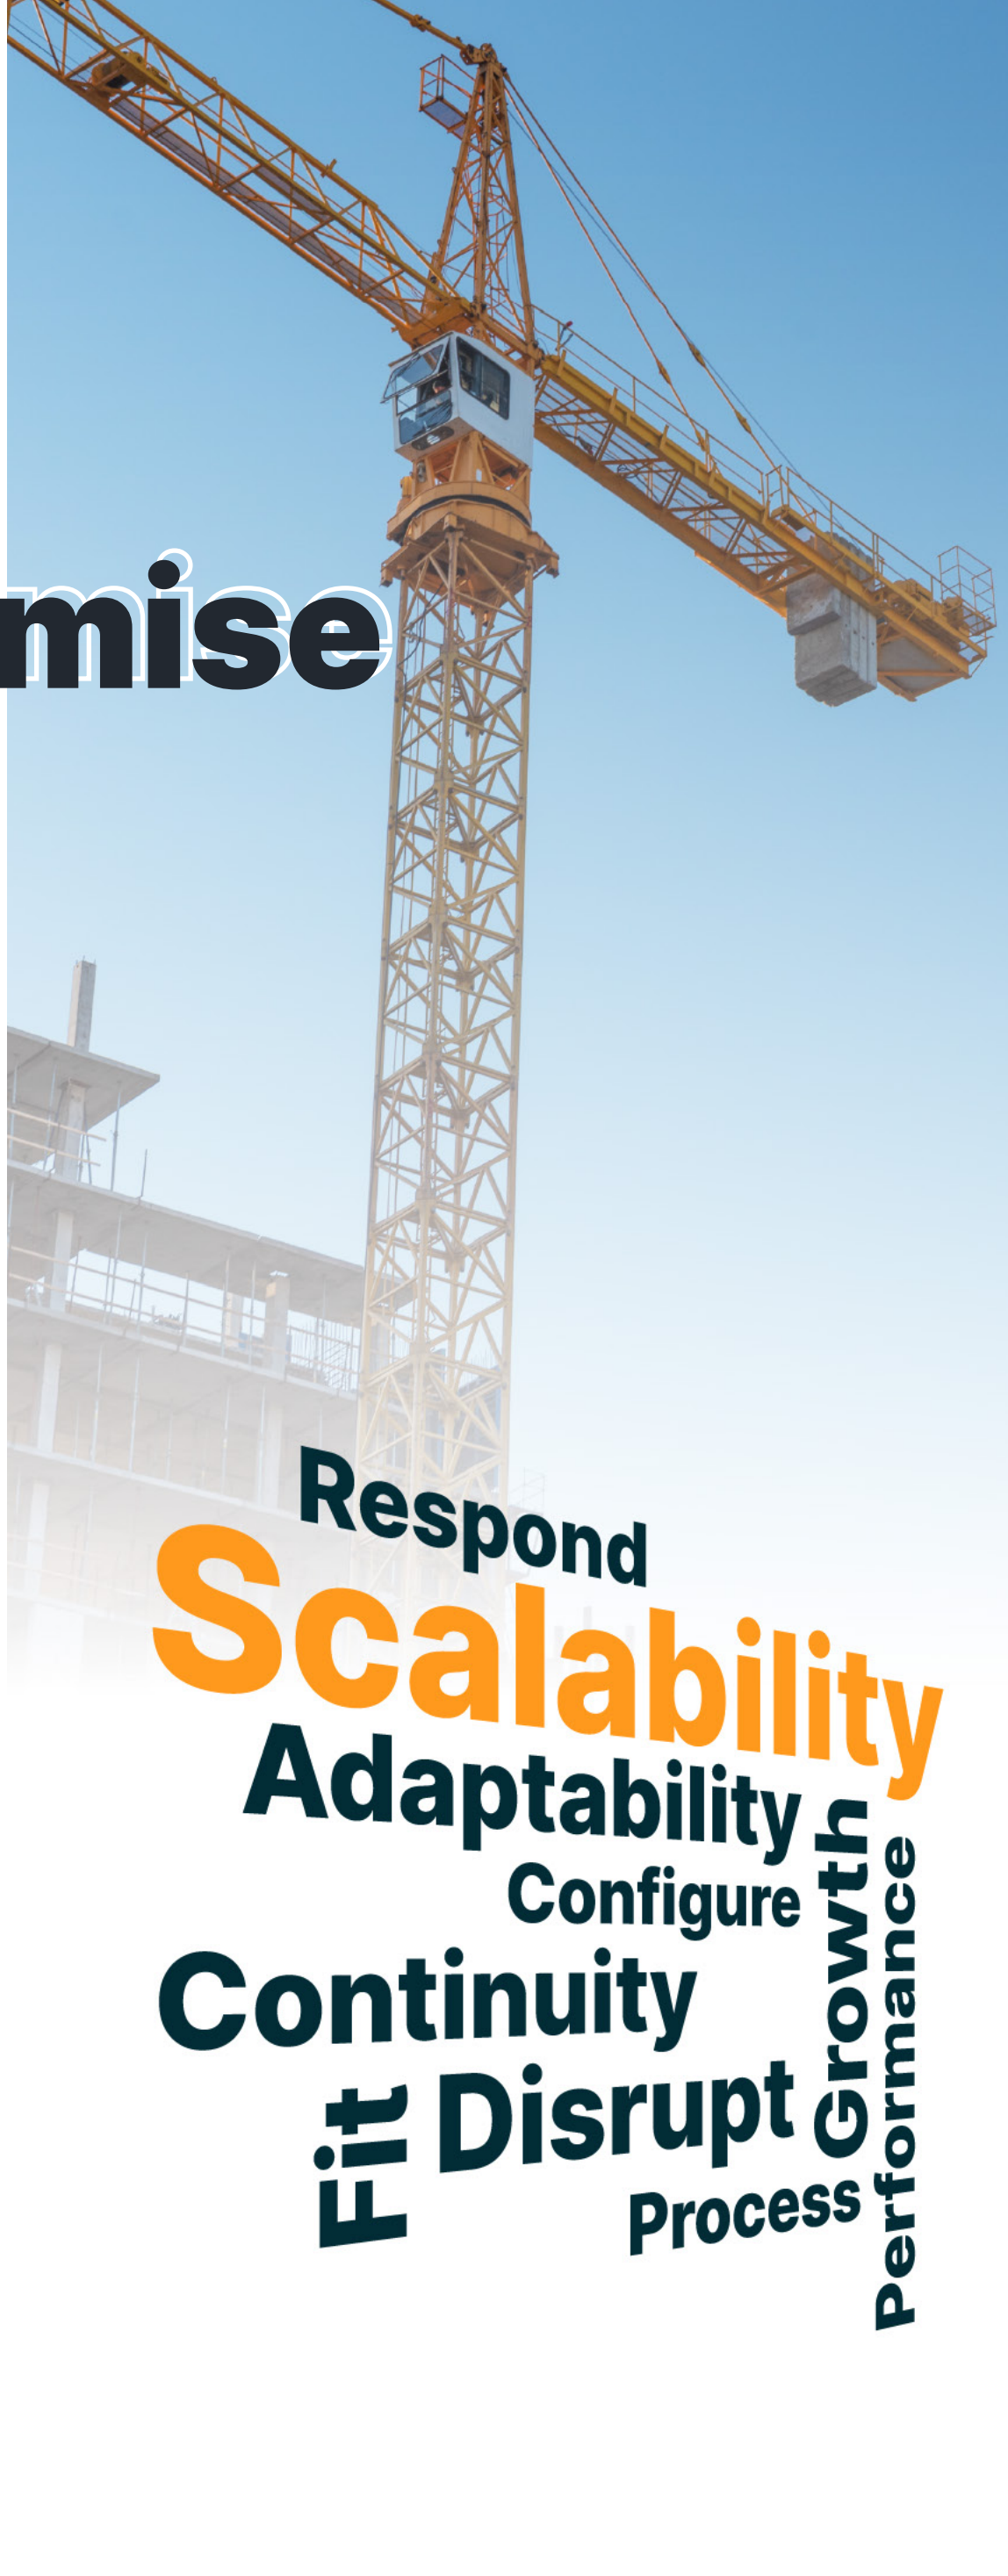

**The Kahua Difference:**  
Flexibility,  
Agility,  
**Scalability,**  
Collaboration,  
Security

**Scalability:** *scal·a·bil·i·ty / ,skālə'bilədē/ the ability to adapt to increased demands in size or scale*

**Does one size ever really fit all? Not so much.**

You can buy a sweater that says it's One Size Fits All, but chances are, you'd prefer it to be smaller ... or larger ... or just different somehow. Still, you buy it and hope for the best. Maybe it will be good enough.

"Good enough" is not nearly good enough for managing major construction projects for the education, healthcare, commercial and government sectors. Regardless of the depth or breadth of the construction, the [project management information system](#) (PMIS) must scale with it.

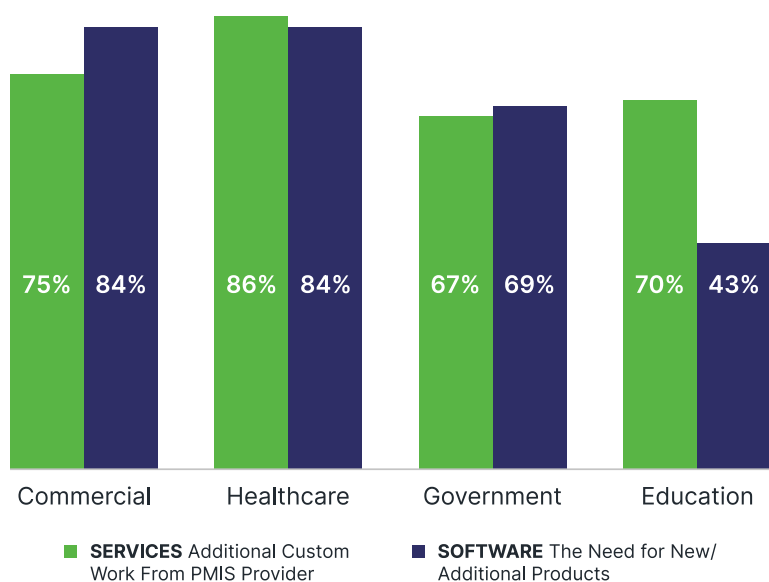

Respond  
**Scalability**  
Adaptability  
Configure  
Continuity  
Fit Disrupt  
Process  
Growth  
Performance

Scalability is the ability to efficiently scale business practices to meet demand. Whether companies have many small projects or the largest mega-projects, their PMIS must deliver the highest level of performance and user experience. If the system is not able to effectively manage change, and you find yourself compromising, it isn't scalable!

To ensure the PMIS your company selects is the right choice for now as well as the future, you must invest in the one that facilitates effective, efficient growth ... both vertically and horizontally. That means if your company expands the type of business, it handles OR the amount of business it acquires.

Dodge Data Analytics surveyed owners in the construction industry within the healthcare, education, commercial and government sectors. An average of 70% responded that when their business changed due to disruptions, they needed to employ additional software products; 74% said they needed additional custom work from their PMIS provider. That is not a scalable system!

**Percentages Reporting That Change Factors Necessitate Additional PMIS Investment** (By Sector)  
Dodge Data & Analytics, 2022

With Kahua, the benefits of a scalable PMIS are evident as it:

- Saves money when the demands of the market grow and change
- Saves operational disruption; there's no need to continually add new technology to fill gaps when new needs arise
- Provides for today's needs while being ready to tackle the requirements of tomorrow

When your business grows and you need to add more users, the response isn't slowed. When you increase the amounts of reports running at any given time, the system won't lag. If your company acquires new businesses or is merged with another, those new processes can be added without pain.

One of Kahua's clients is the largest k-12 school system in the country. After careful review of existing systems and processes, school district leaders realized their PMIS was not going to scale with their growing demands; it was only crippling their delivery of new and expanding learning facilities.

In addition to a PMIS that would not scale, the school system was using the same point solutions for 20 years and had simply outgrown the technology. With six administrative systems and 10 integrated systems, capital programs were being run with disparate processes cobbled together. The school system replaced its old PMIS with Kahua, knowing it could scale to any future growth or expansion.

Kahua has great out-of-the-box functionality, but if clients need it, we can blow out that box's sides, top and bottom.

Clients can have multiple configurations or add modules to cover the lifecycle of the project ... that's scaling horizontally. That's no compromise! Clients can add more users, programs or project value without the system slowing down ... that's scaling vertically.

Get the PMIS that fits, no matter what size you are now or what size you become. Kahua will scale to you.

## Choose Kahua

Kahua is a leading provider of capital program and construction project management software, enabling innovation that is changing the way that capital programs are planned and delivered. Global organizations use Kahua's collaborative solution to improve efficiency, lower costs and reduce project risk throughout the entire lifecycle of their capital programs. Our purpose-built solutions for owners, program managers and contractors enable rapid implementation that minimizes time-to-value and enhances user adoption. With the industry's only low-code application platform, customers can easily customize existing Kahua apps or even build their own new apps to run their business at peak efficiency today and rapidly adapt as business conditions dictate.
